bg-color of span vs other html elements e.g. h1, p etc.

some text

some other text

dkfhdkf what meaningful

div*3>p

```
<div>
  <p></p>
</div>
<div>
  <p></p>
</div>
<div>
  <p></p>
</div>
```

```
div*3>h2{room-$}+p{pangram_$}
```

```
<div>
  <h2>room-1</h2>
  <p>pangram_1</p>
</div>
<div>
  <h2>room-2</h2>
  <p>pangram_2</p>
</div>
<div>
  <h2>room-3</h2>
  <p>pangram_3</p>
</div>
```

Multiple Line Copy → Alt + Shift + Down

By default, 'a', 'span' → **inline**
By default, 'h1', 'p' → **block**

inline class has no effect of width, height, margin-top, margin-bottom etc.
To have effect → **display {inline-block;}**

border-img-slice

Pseudo class

h1:hover { .. }
input:focus {....}
a:visited {color: …}

Even Child Style

li:nth-child(2n) {...}

Pseudo class → **:**
Pseudo Element → **::**

Pseudo element before, after er contents browser a select kra jay na!

Sticky vs Fixed
